

ATLAS - HELIOS Unit Heaters

Over the seventy years we have been producing industrial and commercial heating equipment, we have recognised the need to keep the design of our products abreast of the ever changing requirements throughout the industry both technically and aesthetically. Such is the concept for the "Sabiana Unit Heaters". With the continuing improvement in building techniques and material insulation, it is necessary to provide heating equipment with a greater range, producing the air volumes required with the right heat output. Both the "Atlas" and "Helios" unit heaters have been designed to provide these requirements with the best appearance, in particular the "Helios" unit that with its almost futuristic polished aluminium and contoured design is rather special. This smart new concept in commercial heating units will accommodate all architects who are looking for something

new and different! The "Atlas" and "Helios" units are designed to operate on hot water and steam systems. The model of unit that you would require will depend on the output you require, the leaving air temperature to suit the application, the mounting height and the heating medium. These factors dictate the size of unit, the number of rows in the heater battery and the speed of fan motor. So all factors should be considered when sizing up and selecting the respective model.

The "Atlas" range is available in 10 sizes from 960 m³/h up to over 12500 m³/h.

The "Helios" range is available in 6 sizes up to 7400 m³/h and it provides the same performances and the Atlas unit, only the case is different.

Each size has a choice of one, two or three row heat exchangers and each of these combinations can have a 1400, 900 or 700 rpm motor which is provided suitable for

a three phase electrical supply.

The motor can easily be converted to accept a single phase and neutral supply by the introduction of a capacitor, this conversion is carried out by the installing engineer as for the

instruction on page 45. All these various units can be used for horizontal or vertical discharge, and with the introduction of the various accessories or modifications the range can be adapted to accommodate virtually all applications.

ATLAS - HELIOS Construction

HELIOS

Atlas Casing

The main casing is manufactured from galvanized prepainted steel finished in dove grey, and is assembled from three component parts. The steel is 1 mm thick and being painted before manufacture prevents the material being subject to oxidation. The component parts are held together by snake proof screws and moulded corner selections to facilitate a strong robust box section. The adjustable louvres are held firm by spring loaded pivots.

Fourway distribution is achieved by the addition of a second set of louvres to the front of the unit, generally for downward application.

Helios Casing

The main casing is manufactured from 4 angular diecast aluminum

components and lateral elements made of extruded, anodized aluminium in silver colour. The components parts are held together by snake proof screws, the adjustable louvres are held firm by spring loaded pivots. Fourway distribution is achieved by the addition of a second set of louvres to the front of the unit, generally for downward application.

Fan

The fan is of the helicoidal design with aluminium blades statically and dynamically balanced.

It's rational high-capacity profile provides the maximum air minimum noise level and economical electrical consumption. The fan hub is secured on the motor shaft by means of flat and grub screw.

Fan/Motor Assembly

The fan and motor assembly is made up of three components: the fan, the motor and the finger proof guard, which also acts as the main support and fixing frame. This frame is mounted onto the main casing via residually anti-vibration rubber mountings. Return air clearance room necessary to avoid inefficient performance is only the same as that necessary to remove the Fan/Motor Assembly for routine maintenance.

Motor

The standard motor fitted is a hermetically sealed motor which is maintenance free. The motor is supplied as standard for a three phase 230/400 volt 50 Hz supply with the field coils connected in star formation. With the introduction of a suitably sized capacitor and the alteration of the field coils from star to delta (as per the sketch on page 45), the motor is then capable of operating on a single phase 230 volt 50 Hz supply.

All motors are insulated to IP44 class B standard, but IP55 protection is available. Available also is our flameproof motor for use on three phase supply only. These motors comply to CEI class II2GEEExd IIBT4 specification (1 speed motors only).

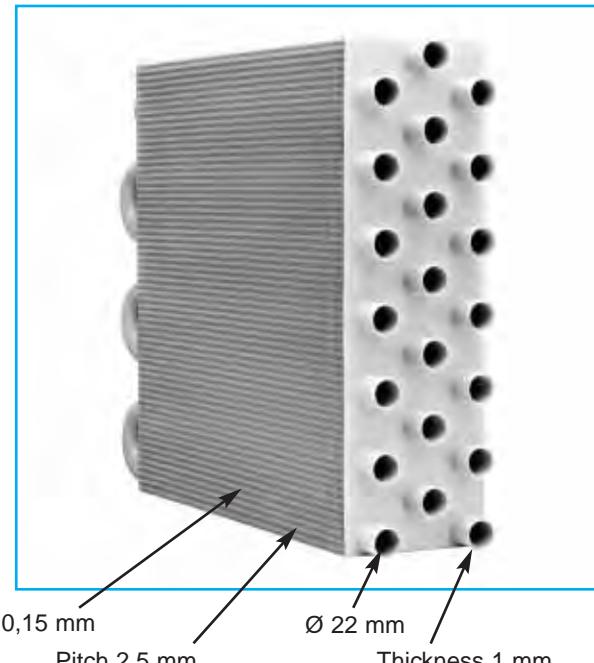

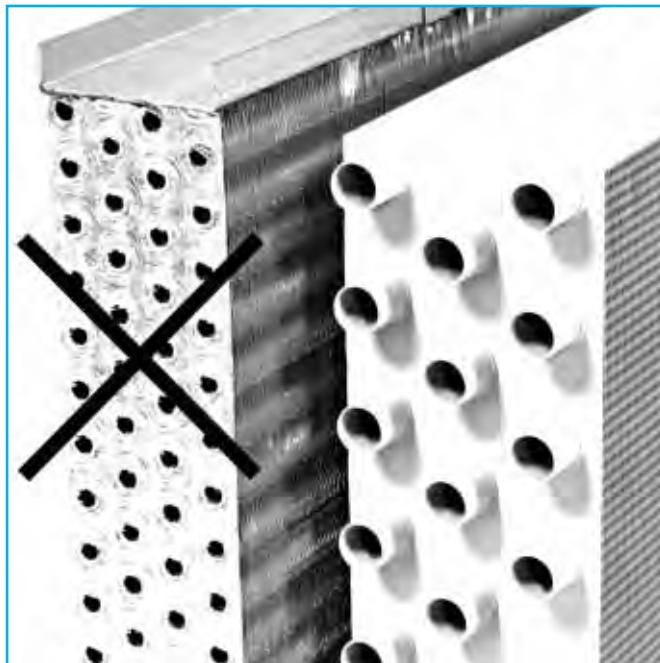

The number of poles in the motor determines the speed at which the motor runs:
 4 pole motor runs at 1400 rpm
 6 pole motor runs at 900 rpm
 8 pole motor runs at 700 rpm

Motor protection

When high pressure steam is used on downflow systems the supply of steam should be isolated when the motor is not running and class H motor must be used. Failure to operate this system will result in the motor being "cooked".

Packaging

The units are packed into strong corrugated cardboard cartons with strengthened upper and lower side sections. These containers are clearly marked with the unit reference.

Heat exchanger

Thanks to its heart Sabiana is a Leader in the Sales of Unit Heaters in Europe.

The battery of Sabiana Atlas and Helios unit heaters with steel tubes ø 22 mm and aluminium fins has the following advantages compared with the copper-aluminium small diameter tube batteries used by most of our competitors.

The material used for the steel tube, which is very thick (1 mm instead of 0,3 - 0,4 mm), makes the Sabiana battery extremely sturdy and long lasting.

The tube big diameter reduces the water pressure drop: this means that reduced power pumps are installed and a very rapid heating capacity is provided.

The Sabiana battery for unit heaters uses a reduced number of tubes to give the same yield: this determines a low resistance to the air flow and consequently an optimum leaving air temperature and a very high throw.

The greater spacing between the fins as well as their thickness facilitate cleaning and maintenance operations, which is essential to keep the unit heater efficient.

The steel tube battery is the ideal choice for plants where all tubes and equipment are made of steel because it avoids physical and chemical unbalance due to the interaction of different metals. The special painting coat makes the battery long lasting and increases the thermal output.

The Sabiana battery can be used with hot water and high temperature hot water with a working pressure up to 16 bar and with steam up to 10 bar. As a matter of fact each battery is submitted to two tests at 30 bars.

However Sabiana in order to

meet any design and installation need can offer a complete set of unit heaters with cooper tubes and aluminium fins. This battery has the same features (tube diameter, fin pitch, etc.) of the steel battery but it is built with copper tube 0,7 mm thick, of higher quality and with a total weight which is double compared with the batteries normally used for unit heaters. The wide range of products includes 10 different sizes with 1, 2 or 3 rows each.

JANUS 05 Air Conditioner

JANUS 05

The Janus Air Conditioners are suitable for hot water and chilled water supply. They are not suitable for steam supply.

Motor

The standard motor fitted is a hermetically sealed motor which is maintenance free. The motor is 2 speeds, 3 phase, single voltage, 400V 50Hz, with klixon thermal protection.

Heat exchanger

The heat exchanger (3 or 4 rows) is manufactured from the highest quality copper tube. The fins are pressed from aluminium sheet, bonded onto the tubes

facilitating the maximum transfer contact available.

Fan assembly

The fan and motor assembly is made up of three components: the fan, the motor and the finger proof guard, which also acts as the main support.

Casing: the main casing is manufactured from galvanized prepainted steel finished in dove grey and it is assembled from three component parts.

Condensate tray

The insulated condensate tray is fitted inside the casing under the battery.

JETSTREAM Induction flow optimizer

Induction flow optimizer Jetstream Sabiana for Atlas and Helios unit heaters

The induction flow optimizer jestream allows the reduction of the mean leaving air temperature in the unit heaters (Sabiana series Atlas and Helios) and to increase the throw of the equipment with

considerable advantages both in terms of energy saving and environment comfort. The induction flow optimizer Jestream increase the air speed thanks to the special shape of its deflecting

louvres which allow the creation of various layers of hot air at the unit heaters outlets. The depression created between the layers induces a lateral aspiration of ambient air

that mixes with then air heated by the unit, thus reducing the leaving air temperature and increasing the throw.

The leaving air temperature from the units has a decisive influence on hot air stratification and consequently on energy saving: for each degree centigrade decrease in temperature there is a 1.5% decrease in energy consumption.

The use of the induction flow optimizer has the following advantages:

a) energy saving:

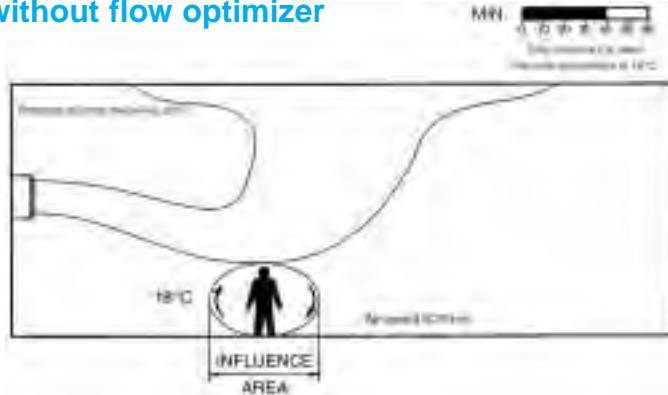

- reduced hot air stratification within the building
- reduced operating time of the units with the same ambient temperature.

Energy saving varies between a minimum of 5% and a maximum of 15%, with maximum assessment in two seasons.

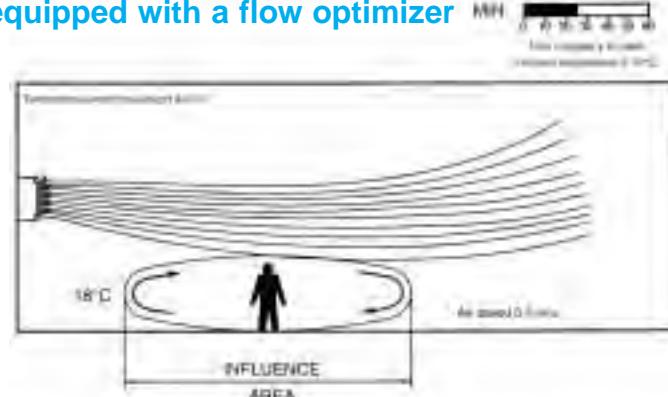

b) environment comfort advantage:

- increase floor temperature uniformity with greater comfort area
- possibility to install smaller and quieter units, due to the increase of the throw.

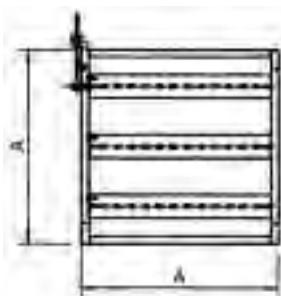

Air flow produced by a unit heater without flow optimizer

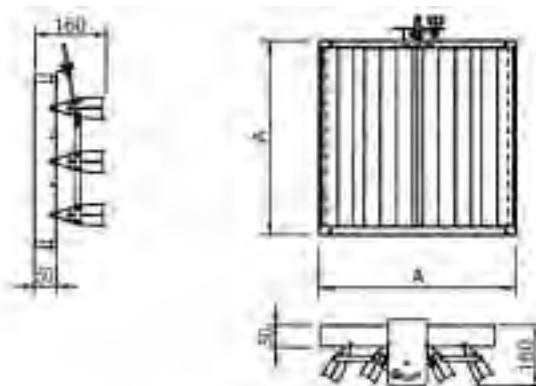

Air flow produced by a unit heater equipped with a flow optimizer

For "Helios" substitute ref. "A"

CORRECTION FACTORS

Water temperature °C

for "H" for sizes from 1 to 6
ie 4H42.

For sizes 1 to 6 with
8 pole motor (700 r.p.m.),
the performance data
can be obtained multiplying
the 4 pole motor (1400 r.p.m.)
figures by the following
correction factors:
KCal/h - Watt x 0.65
m³/h x 0.50
dB(A) x 0.76

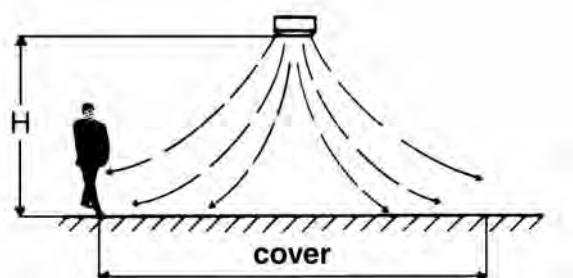

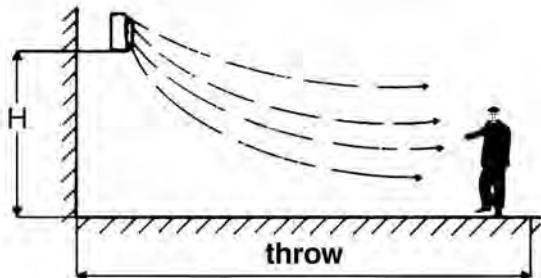

E.A.T.	50/35	55/40	60/45	65/50	70/55	75/60	80/65	85/70	90/75

For "Helios" substitute ref. "A"

for "H" for sizes from 1 to 6
ie 4H42.

For sizes 1 to 6 with
8 pole motor (700 r.p.m.),
the performance data
can be obtained multiplying
the 4 pole motor (1400 r.p.m.)
figures by the following
correction factors:
KCal/h - Watt x 0.65
m³/h x 0.50
dB(A) x 0.76

CORRECTION FACTORS

The air conditioners not only cool the air, but also feature a dehumidification function. When the appliance operates in climatic conditions where the dehumidification function prevails (for example, when first starting the appliance), some droplets of atomised condensate may be released by the appliance. This should be kept in mind during installation, so as to avoid causing disturbance to persons or objects. **The fluid should always be shut off when the fan stops.**

JANUS 05 water side pressure drop (kPa)

The water pressure drop figures refer to a mean water temperature of 10°C; for different temperature, multiply the pressure drop figures by the correction factors K.

ATLAS STP - Door Curtain

Description

The ATLAS SABIANA STP door curtain unit is designed to provide a screen of warm air to restrict cold wind blowing into the area and to reduce the heated atmosphere inside the area from scaping out. Generally the unit is controlled by a door switch, operating the unit on opening and isolating on closing, sometimes with a short time delay to assist the main heating to resume the desired ambient temperature as quickly as possible. This

system is relatively cheap to install, maintain and run, and the savings are not only pure economy of heating, but comfort to personal reducing stopped production times. The unit is contructed in four main components. Main Casing, Heater Battery, Fan/motor assembly and Diffuser.

Heater Battery

Is manufactured from high quality steel or copper tube 22 mm of diameter to reduce resistance with mechanically bonded aluminium fins for high

efficient heat transfer. The batteries are available in one row, two rows or three rows.

Fan/Motor Assembly

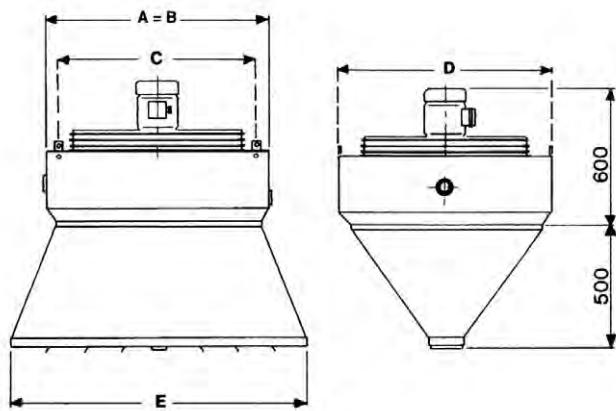

Is supplied as for unit heater range with finger proof guard as a standard feature. The hermetically sealed induction motor is sealed for life to give trouble free use. The fan consists of aluminium helicoidad blades statically and dynamically balanced with a cast alloy hub, keyed into the motor shaft. The whole assembly is mounted onto the

casing with antivibration rubber mounting blocks.

Diffuser

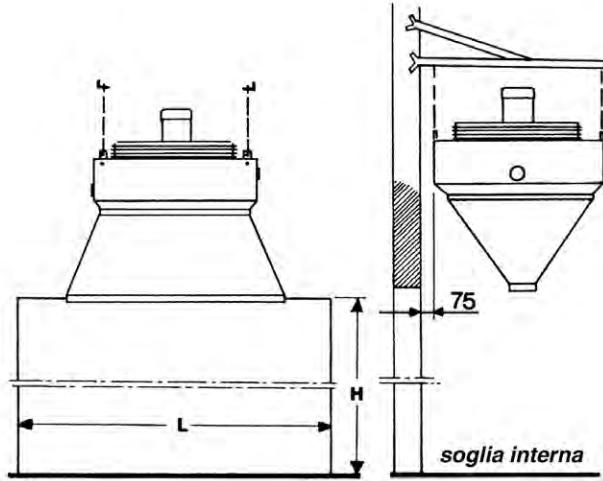

Is of the fishtail design produced from steel sheet. The discharge diffuser has manually adjustable louvres for individual requirements. The ATLAS SABIANA STP Door Curtain units are available in three sizes, three outputs of heater battery in each. Full design assistance is available enabling the best possible economy and efficiency to you requirements.

ATLAS-HELIOS one speed - Three phase - 230/400V motor

The standard motor fitted on the Atlas and Helios ranges is a hermetically sealed motor which is maintenance free. The motor is supplied as standard for a three phase 230/400V 50Hz supply. All motors are insulated to IP44 class B protection.

Motor connection

Every motor has to be protected with a suitable protector calibrated at a current of 1,10 - 1,15 times the current indicated on the plate.

Two speed Delta-Star - three phase motor with klixon thermal protection

On request the unit heaters can be supplied with 4 pole or 6 pole sliding motors. These motors are 2 speed, 3 phase, single voltage, 400V-50Hz with klixon thermal protection. With these motors it is possible to reduce the speed changing the connection from delta to star.

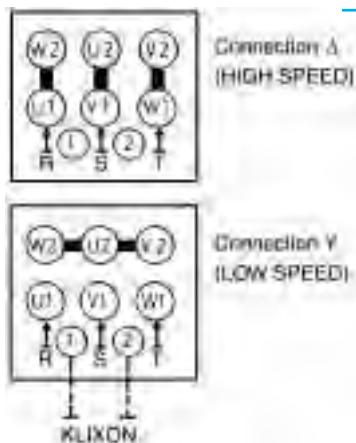

The JANUS and AIX ranges are supplied with this motor execution.

BSA Multi-function automatic control panel for two speed Delta-Star motors, 4/6 or 6/8 poles

Description

Wall mounting plastic container complete with transparent door.

The front panel includes:

- control switch
- timer / by-pass switch
- signal lights
- auxiliary protection fuse carrier
- timer compartment cover (accessory)

Versions

- BSA-B without timer
- BSA-A with manual daily timer
- BSA-D with digital weekly timer

The basic version, BSA-B, is supplied without a timer, yet is ready to be fitted with this accessory if required. Simply remove the timer cover, insert the timer chosen and connect it internally to the pre-installed wiring inside the control panel.

Technical specifications

Visual installation

Index of protection IP 54

Operating voltage 3 x 400V 50Hz

Control voltage 1 x 230V

Rated operating current 9 A 400V (AC3)

Application

Multi-position, multi-function switch for automatically controlling the speed of Sabiana unit heaters with two-speed, 400V three-phase motors.

Description

The control panel is supplied without a timer. The timer can be fitted after installation, by inserting it in the panel and connecting it electrically using the special pre-wired connector.

Electromechanical daily timers and digital weekly timers are available.

Operation

- **Control switch on “0”**: disconnects power to the unit heaters and thus the unit heaters are off
- **Control switch on “fan”**: continuous operation of the unit heater at low speed
- **Control switch on “FAN”**: continuous operation of the unit heater at high speed
- **Control switch on “AUTO”** (only for devices with timer, BSA-A and BSA-D): enables the automatic switching of the unit heater speed according to the status of an external 1- or 2-step thermostat. The timer can be combined with two different thermostats, with separate settings for night-time or daytime operation. **Using thermostats with changeover contacts allows automatic switching from low - high fan speed with the “day” thermostat, and low speed - fan off with the “night” thermostat.** Using two-step thermostats allows the speed of the unit heater to be switched automatically from high to low and to off when reaching the set temperature.
- **Function switch on “day”**: bypasses the timer and forces the connection to the “day” thermostat
- **Function switch on “night”**: bypasses the timer and forces the connection to the “night” thermostat

Anti-freeze function

The control is fitted for connection to an external room thermostat that is suitably set to a minimum required value. When the thermostat with anti-freeze function is connected, the control panel switches on the unit heater at low speed, even if the Control switch is on OFF.

Motor thermal overload devices

The Sabiana unit heater motors are fitted with internal TK thermal overload devices. The thermal overload device must be connected to the control panel, so that the latter automatically cuts off power to the unit heater if the overload is activated. If the control panel is connected to a series of unit heaters, the TK overload devices on each motor must be connected together in series, and then connected to the corresponding terminals on the control panel.

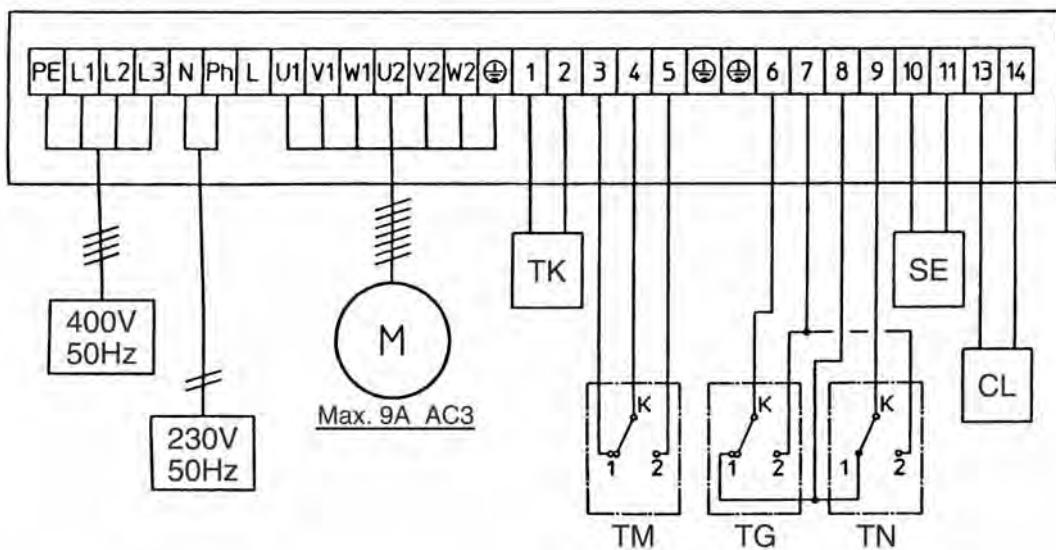

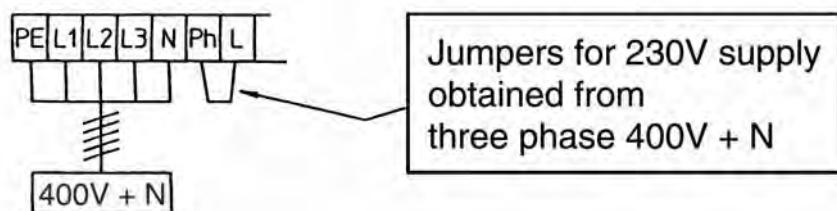

Important

This device is not suitable for outdoor use or for the control of single-phase motors.

BS 2S Manual two-position switch for two speed Delta-Star motors, 4/6 or 6/8 poles

Description:

Wall mounted plastic case, containing:

- 1 manual switch (1-0-2) for manually selecting the unit heater fan speed.
- 1 four pole control contactor.
- 1 voltage-free auxiliary contact used to control or lockout of external appliances.
- Terminal block for the connection of the unit heaters, motor overload devices and external thermostat.

Operating voltage 3 x 400V 50Hz

Control voltage 1 x 230V

Rated operating current 9A 400V (AC3)

Applications:

Switch for controlling the fan speed on one or more Sabiana unit heaters. The control can be connected to an external room thermostat.

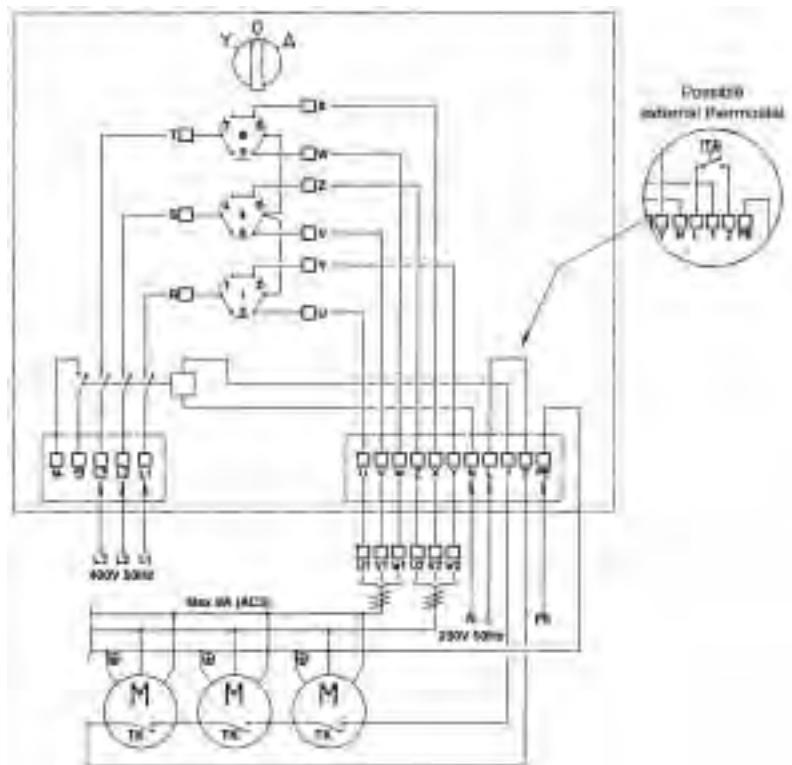

Motor thermal overload devices

The Sabiana unit heater motors are fitted with internal TK thermal overload devices. The thermal overload device must be connected to the control panel, so that the latter automatically cuts off power to the unit heater if the overload is activated. If the control panel is connected to a series of unit heaters, the TK overload devices on each motor must be connected together in series, and then connected to the corresponding terminals on the control panel.

Important

This device is not suitable for outdoor use or for the control of single-phase motors.

BS 2-ST Manual two-position switch with thermostat for two speed Delta-Star motors, 4/6 or 6/8 poles

Description:

Wall mounted plastic case, containing:

- 1 manual switch (1-0-2) for manually selecting the unit heater fan speed.
- 1 four pole control contactor.
- 1 voltage-free auxiliary contact used to control or lockout of external appliances.
- 1 room thermostat
- Terminal block for the connection of the unit heaters, motor overload devices and external thermostat.

Technical specifications

Visual installation

Index of protection IP 54

Operating voltage 3 x 400V 50Hz

Control voltage 1 x 230V

Rated operating current 9A 400V (AC3)

Applications:

Switch for controlling the fan speed on one or more Sabiana unit heaters, with built-in temperature control. Depending on the set room temperature, the control stops or starts the unit heaters at the speed selected on the speed switch. The bulb of the thermostat is positioned outside of the panel casing.

Motor thermal overload devices

The Sabiana unit heater motors are fitted with internal TK thermal overload devices. The thermal overload device must be connected to the control panel, so that the latter automatically cuts off power to the unit heater if the overload is activated. If the control panel is connected to a series of unit heaters, the TK overload devices on each motor must be connected together in series, and then connected to the corresponding terminals on the control panel.

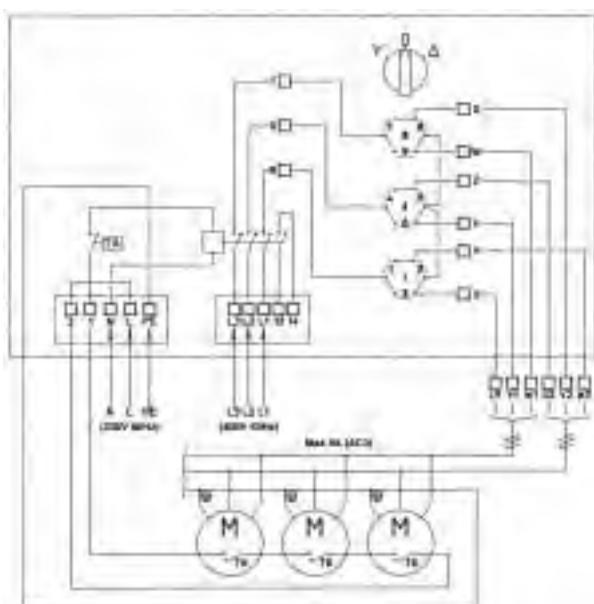

Installation

Check that the position chosen for the installation of the panel does not affect the correct operation of the room thermostat. Avoid fastening the control panel to cold walls, in areas affected by cold/hot air currents or at an unusual height.

Important

This device is not suitable for outdoor use or for the control of single-phase motors.

BS 3-ST (Janus 05 only, Manual three-position switch with thermostat for two speed Delta-Star motors, 4/6 or 6/8 poles

Description:

Wall mounted plastic case, containing:

- 1 manual switch for manually selecting the unit heater fan speed as follows:
in Summer 1 speed selection, low speed only (0-1) - in Winter 2 speed selections (0-1-2)
- 1 four pole control contactor.
- 1 voltage-free auxiliary contact used to control or lockout of external appliances.
- 1 room thermostat
- Terminal block for the connection of the unit heaters, motor overload devices and external thermostat.
